Reference is made to the following document:

D1: EP0936228

The present invention relates to a composition comprising
- water-soluble or water-swellaable associatively thickening
copolymers containing sulfo groups
- and a nonionic polysaccharide derivative

the process for preparing it and the use of this composition in
aqueous building material systems based on hydraulic binders such as
cement, lime, gypsum plaster, anhydrite, etc. and also in water-
based paint and coating systems.

The water-soluble or water-swellaable associatively thickening
copolymers containing sulfo groups are utilized in D1 as replacement
for the water-soluble nonionic derivatives of polysaccharides, in
particular cellulose and starch derivatives, which are routinely
used in aqueous building material mixtures, in order to retard or
prevent the undesirable evaporation of the water required for
hydration and processing or retard or prevent its flow into the
substrate.

Water-soluble nonionic derivatives of polysaccharides are used in
their preparation (example 2 in D1) but as protective colloids and
not in the composition as indicated in claim 1 of the application.

The subject matter of claim 1 is therefore novel (PCT Article 33(2))
